

Disclaimer

Please ensure you read and understand the following information prior to completing the medical assessment. The consultation should not take longer than 3-5 minutes to complete.

It is important that you answer all the questions correctly and honestly to allow the Pharma Health clinical team to assess your needs and ensure the treatment is safe and effective for you.

The information you provide us is treated with the utmost confidentiality & will be reviewed by a UK registered pharmacist prescriber. The questions listed in this medical assessment will help provide the pharmacist prescriber with an appropriate level of information to make an informed decision on whether the treatment is suitable for your condition.

Confirmation

By clicking “Continue”, you are confirming that you:

General

- Are 18 years old or above.
 - Are completing this questionnaire for yourself and to the best of your knowledge.
 - Understand that any treatment prescribed for you is for your personal use only.
 - Will disclose any serious illnesses or operations you have had.
 - Will disclose any medications (including prescription and non-prescription medications) you currently take.
 - Are happy for us to contact you if we have any queries about your condition.
 - Agree to follow any additional advice given by the Pharma Health clinical team.
 - Have read, understood and agreed to our Terms & Conditions, Privacy Notice and Terms of Sale.
-
- Understand that antibiotic treatment can cause your body to develop resistance, so in the future antibiotics may not work so well. Most cystitis will clear up without any treatment, so you should only take an antibiotic if you have had bothersome symptoms for more than two days.
 - Understand that if you have a fever or uncontrollable shivering, pain in the flank areas of your back or are vomiting, these are signs of a possible severe urine infection that should be checked urgently in person. You should contact your GP or out of hours service immediately, or phone 111 to get advice about your treatment.
 - Understand that if you have more than 3 episodes of cystitis in a year, or more than 2 in 6 months, it's

important that you discuss this with your GP so they can investigate it further. It's important that they check for any reasons why you may get this number of episodes. Usually this involves checking a urine sample, and may involve other tests.

- Understand that Trimethoprim is an antibiotic used to treat cystitis. It is not safe to take in pregnancy unless advised by your own GP.
- Understand that to help your symptoms, you need to ensure you are drinking water to avoid dehydration.
